Education

Bachelor of Applied Mathematics and Informatics, FH Aachen, Germany

- FH Aachen, Germany (2022–2024)
- UMI, Morocco (2019–2022)

Technologies

Programming: Java, Kotlin, TypeScript, JavaScript, Python, C++

Frameworks & Technologies: Spring Framework, Spring Cloud, Java EE, Django, Angular, JSP / JSTL, Camunda, Bootstrap 5, Html & CSS

Testing & CI/CD: JUnit 5, Mockito, Selenium, Test-containers, Docker, GitHub Actions, Jenkins (Platform usage only), Git, Gradle (Beginner), Maven, npm, pip

Databases: Consuming MySQL & Oracle / Building Data tables

Used Operating System: Kali Linux, Ubuntu Linux, Raspberry Pi, Bash Scripting.

Others: Full-Stack Development, Web Security, UML & Merise Modeling, CI/CD Automation (GitHub Workflows), Agile Methodologies, Team Collaboration, Unit & Integration Testing

ZIAD BOUGRINE

Software Engineer (3 years of experience)

Abstract

Full-stack developer focused on building maintainable and scalable web applications in professional team environments. Works in a structured manner on analyzing, optimizing, and enhancing existing systems, with a strong emphasis on clean code, security, and stability. Brings experience collaborating in agile Scrum teams and reliably works with team members and stakeholders to implement business requirements.

Work Experience

Capgemini, Germany

Apr. 2026 - Present

MGM Technologies Partners, Germany

Oct. 2023 - Mar. 2026

- **Software Engineer**, Public Sector (**Oct. 2024 - Mar. 2026**)
 - Developed and improved portal features and user workflows.
 - Refactored code for performance and maintainability.
 - Resolved production issues and ensured system stability.
 - Maintained dependencies and ensured data quality through validation and testing.
 - Addressed security vulnerabilities, including CVEs.
- **Backend Developer**, Low-Code Platform (**Apr. 2024 - Sep. 2024**)
 - Developed and refactored features with testing and documentation.
 - Resolved issues across environments and supported migrations.
 - Optimized test performance.
 - Handled releases, dependencies, and security vulnerabilities (CVEs).
- **Intern - Bachelor Thesis**, Low-Code Platform (**Oct. 2023 - Mar. 2024**)
 - Built a reusable payment module for A12 workflows.
 - Integrated Stripe & PayPal (credit cards, redirects, status handling).
 - Developed backend with Java, Spring Boot & Camunda BPMN.
 - Implemented secure logic with full test coverage (unit, integration, E2E).
- **Overall Tech:** Java, Kotlin, TypeScript, Spring Boot, JSP/JSTL, Camunda, A12, JUnit 5, Selenium, Gradle, Jenkins, Git, Docker

SIJ, FH Aachen, Germany

Feb 2023 - Mai 2023

- **Working Student**, Energy Sector
 - Built a high-performance Java/Spring backend for real-time communication with eCar/eBike charging stations.
 - Developed REST APIs (JWT auth, reservations, charging control) and an Angular admin dashboard.
 - Designed MySQL database and integrated PV forecasting for data visualization.
 - Deployed on Raspberry Pi and owned full system lifecycle (architecture, development, testing)
- **Overall Tech:** Java, TypeScript, Spring Framework, Lombok, GSON, Angular, HTML & CSS, Maven, Git, Docker, MySQL, Modbus TCP, Raspberry Pi
